A way to say thank-you after
the last SUSE Hackweek

ps. Both logo and site uses new color palette by lcp!
Thanks Jay! Many thanks to Georg and heroes for their
support on infra side!

A way to say thank-you
before covid kicked in.

Roughly 35 DVD boxes sent
to people who contributed
to Leap release.

Got one? Raise your hand
please :-)

You took the Leap to 15.3!

Dear __USER__

You have been recognized by openSUSE Leap users as an exceptional contributor to the openSUSE Leap 15.3 release in our [release retrospective](#).

We really hope that this e-thank you will make you feel special, because you surely are one of the kind!

__TEXT__

Thank you for making the openSUSE Leap 15.3 release happen.

Congratulations, and keep up the great work!

openSUSE Release team

Make sure to load all the cool images for this recognition. E.g. by pressing Ctrl+I in Evolution.

A way to say thank-you after covid kicked in.

open source press no longer produces DVD boxes. A private email with personalised message (similar to SUSE internal ovation)

Got one? Raise your hand please :-)

What issues are we trying to address?

- No more nice collectibles (like DVD boxes)
- **Freeware t-shirt vouchers distribution? Any sponsor around?**
- There is only SUSE-internal recognition tool, so I can't really use it to recognize community friends.
- If people don't see then it then it's not very useful.
- Social media integration
- How to let team leads, peers, know that person is helping in the community?
- Existing tools are really bad at recognizing multiple individuals or teams. E.g. Ovation

Kudos aka openSUSE Recognition Platform

a project by [lkocman](#)

Updated 7 months ago. 7 hacker . 4 followers.

Description

[Relevant blog post at news-o-o](#)

I started the **Kudos** application shortly after **Leap 16.0** to create a simple, friendly way to recognize people for their work and contributions to **openSUSE**. There's so much more to our community than just submitting requests in OBS or gitea we have translations (not only in Weblate), wiki edits, forum and social media moderation, infrastructure maintenance, booth participation, talks, manual testing, openQA test suites, and more!

Goals

- Kudos under [github.com/openSUSE/kudos](#) with build previews aka netlify
- Have a [kudos.opensuse.org](#) instance running in production
- Build an **easy-to-contribute recognition platform** for the openSUSE community a place where everyone can send and receive appreciation for their work, across all areas of contribution.
- In the future, we could even explore **reward options** such as **vouchers for t-shirts or other community swag**, small tokens of appreciation to make recognition more tangible.

Resources

(Do not create new badge requests during hackweek, unless you'll make the badge during hackweek)

- Source code: [openSUSE/kudos](#)
- Badges: [openSUSE/kudos-badges](#)
- Issue tracker: [kudos/issues](#)

[+ Join this project](#)

Matrix notifications on the openSUSE Chat matrix channel were a bit too spammy.

We did reduce traffic by skipping badge notifications and turned off startup/shutdown message from kudos-matrix-bot .

Kudos August 2026

15. Sep 2026 | openSUSE Kudos Team | CC-BY-SA-3.0

Welcome to our monthly report from the [openSUSE Kudos recognition platform](#), where we take a moment to put a spotlight on the people who stepped up, helped others, and made this community a little brighter.

During the month of **August 2026**, **17** users received **24** kudos, and **419** badges were awarded to **251** contributors. You can see [stats](#) for this and previous months.

Spotlight

Top of the list in August: [Bernhard Wiedemann \(@bmwiedemann\)](#) with **5 kudos**, more than twice what anyone else collected. Most of them (**4**) landed in Code & Engineering. That alone accounts for **5** of the month's **24** kudos. Second place was a three-way tie at **2 kudos** each: [@bigironman](#), [Gertjan Lettink \(@knurpht\)](#) and [Martin Schreiner \(@mschreiner\)](#). Behind them, thirteen more people each picked up a kudo of their own, and

Welcome to our monthly report from the openSUSE Kudos recognition platform, where we take a moment to put a spotlight on the people who stepped up, helped others, and made this community a little brighter.

During the month of August 2026, 17 users received 24 kudos, and 419 badges were awarded to 251 contributors. You can see [stats](https://kudos.opensuse.org/stats) for this and previous months.

This is also available as article at <https://news.opensuse.org/2026/09/14/kudos-august>

Spotlight

Top of the list in August: Bernhard Wiedemann (@bmwiedemann) with 5 kudos, more than twice what anyone else collected. Most of them (4) landed in Code & Engineering. That alone accounts for 5 of the month's 24 kudos. Second place was a three-way tie at 2 kudos each: @bigironman, Gertjan Lettink (@knurpht) and Martin Schreiner (@mschreiner). Behind them, thirteen more people each picked up a kudo of their own, and all of them are listed below.

A milestone is worth stopping for: @dirkmueller, @jengelth, @krop and @pluskalm reached 100 Tumbleweed Contributions. That is the kind of steady, long-haul contribution that rarely makes headlines. Congratulations!

Not all of it is code, either. Documentation, translation, artwork, moderation and event work keep openSUSE usable and welcoming for everyone, and this month @aplanas, @bmwiedemann, @jimed-rand and @lkocman earned Wiki Contributor.

Kudos

Here are the thank-you notes themselves: 24 peer-to-peer kudos written by contributors about contributors, grouped by the person being thanked. The order follows the standings above, so August's most recognized contributor opens the list.

Bernhard Wiedemann (@bmwiedemann) received the following kudos:

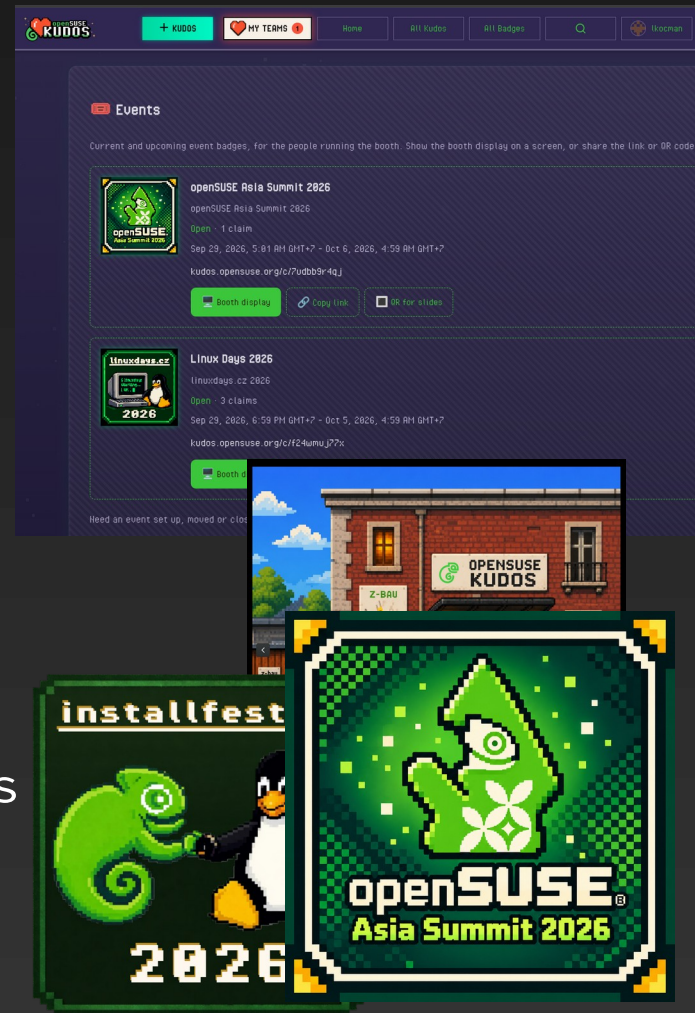

Next steps (from oSC2026)?

- Event badges we have Installfest 2026, I want to have installfest 2026, oSC2026 speaker + volunteer badge!
- More dynamically assigned badges for contributions
- Physical rewards? Vouchers for points?

What actually happens since June 2026?

- Event badges via QR code. Ideally this would be handled by openSUSE Booth people on conferences.
- Dynamic badges for wiki wiki edits, Leap (git) and Tumbleweed (obs) contributions.
- Introducing Teams
- Physical rewards? (no update)
 - Somebody had idea to solve who pays for shipping problem by distributing t-shirts at conferences

Introducing teams

Recognizing just one or two individuals you might know might not always reflect situation properly you might miss individuals.

Recognizing team means nobody is missed that it was sad. (Concern raised by Agama team)

Teams are self-managed.

Everybody can start a team. People can join, team manages team and approves new members. No admin permission needed.

Feature was added like a week or two ago.
